

Project Design Phase-I
Solution Architecture

Date	16 October 2022
Team ID	PNT2022TMID13146
Project Name	Personal Expense Tracker Application
Maximum Marks	4 Marks

Team Members:

- 1) Alden PA - 19I333 (Leader)
- 2) Viraantira Kumar B - 19I307
- 3) Sathish N - 19i346
- 4) Siva Prasath - 19i350

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Example - Solution Architecture Diagram:

Personal Expense Tracker solution architecture
